

STOCKHOLM CITY HALL

Photographs © A. Disley

The City Hall, a superb building of the early twentieth century, occupies a spectacular position on the waterfront facing the Old Town of Stockholm. The immense Blue Hall is the scene of the Nobel Prize banquet each year.

The organ was built by E.F. Walcker in 1925, with four manuals and 115 stops. The main organ is in a gallery near the ceiling, concealed behind a screen. The Echo Organ of 25 stops is placed above the ceiling, and is connected to the opposite side of the Hall by a long acoustic tunnel.

The organ was extensively altered in 1972 by the Swedish organ builder Magnus Fries. He increased its size to five manuals and 138 stops, commissioning new slider chests and some new pipework from Harrison & Harrison; almost all of the original Walcker pipework was retained, including the Echo Organ, which survives in its entirety. The console, originally within the instrument, was replaced with a new one on the floor of the Hall.

In 2008 the main organ was re-designed by Harrison & Harrison with a revised layout and mechanism and a new five-manual mobile console. The musical structure is based on the complete Walcker scheme of 1925, but also includes some of the 1972 additions and several new stops.

THE WALCKER ORGAN 1925 REBUILT BY HARRISON & HARRISON
