

EXETER CATHEDRAL

John Loosemore built an organ for the Cathedral in 1665. It underwent several changes during the next two centuries, but the magnificent case has survived to this day, having been enlarged to superb effect at the time of a radical rebuild by Henry Willis in 1891.

Harrison & Harrison altered the organ and modernised the actions in 1933. The organ was renovated in 1965, with some tonal changes, including the addition of the Trompette in the Minstrels' Gallery on the north side of the nave. In 2001-3 stops 12, 14, 24 and 29 were provided, and a new section of the organ was installed in the Minstrels' Gallery.

In 2013-2014 the organ was completely reconstructed. The internal layout was redesigned in order to give better distribution of sound and to improve access for maintenance; new soundboards and actions were provided. The tonal scheme was retained in its entirety, and stops 10, 18 and 47 were added.

The Choir and Solo Organs are in the smaller cases facing east and west respectively; the Swell, Great and most of the Pedal are within the main case. The pipes of the Pedal Open Wood and the 32ft Contra Trombone lie horizontally within the north side of the pulpitum, and the console is on the south side. The longest pipes of the Pedal 32ft Contra Violone stand in the south transept.
